SUMMARY

Senior Backend Developer and Sr. AI First Full Stack Engineer with 5 years of experience specializing in building scalable, distributed systems using Node.js, NestJS, and TypeScript. Expert in API development and optimizing database performance across MongoDB and PostgreSQL. Proven track record of enhancing system speed through advanced Caching techniques (Redis) and delivering complex projects from ideation to deployment.

EDUCATION

Bachelor of Computer Applications (BCA) – SPEC college Bakrol (2021)

SKILLS

- Node.js
- Microservices
- Express.js, Nest.js, Typescript
- MongoDB, PostgreSQL
- Caching techniques, Redis, Kafka, Linux, RESTful APIs, Git

EXPERIENCE

Sr. Backend Developer – Groovy Techno web Pvt. Ltd

Aug 2021 – July 2026

- System Architecture: Engineered and maintained robust backend using NestJS and TypeScript, ensuring high availability and seamless data flow.
- API Development: Developed and documented secure, high-concurrency RESTful APIs and plugins, focusing on low-latency performance and developer experience.
- Project Portfolio: Successfully delivered and scaled the following projects: BooYaah, Saayam, Aauti Social these projects completed only backend. ContentGen and Menthra these projects completed using AI Full Stack.
- Feature: Architected and deployed mission-critical modules, including high-concurrency Step Tracking systems, secure Payment Gateway flows, real-time Chat Applications (Socket.io/WebSockets), and scalable Social Media Plugins.

KEY RESPONSIBILITIES

- Designed and maintained scalable backend systems using NestJS and TypeScript for high-availability applications.
- Developed secure and optimized RESTful APIs handling high-concurrency requests.
- Developed end-to-end full-stack applications, integrating frontend and backend components.
- Designed microservice-based architectures for scalable and maintainable applications.
- Implemented Redis caching strategies to improve API performance and reduce server load.
- Built real-time communication systems using Socket.io and WebSockets.
- Worked with MongoDB and PostgreSQL for schema design, query optimization, and scalable data management.
- Collaborated with frontend, QA, and product teams to deliver production-ready features.
